

Compile Lio Sam Algorithm

This algorithm has been successfully compiled and run on the Orin-Nano motherboard. Orin-Nano motherboard system environment: **Ubuntu22.04+ROS2-Humble**.

Installing Dependencies

```
# Replace <ros2-version> here with your ros2 version, humble is recommended.  
sudo apt install ros-<ros2-version>-perception-pcl \  
    ros-<ros2-version>-pcl-msgs \  
    ros-<ros2-version>-vision-opencv \  
    ros-<ros2-version>-xacro  
sudo add-apt-repository ppa:borglab/gtsam-release-4.1  
sudo apt install libgtsam-dev libgtsam-unstable-dev
```

Transplanting and Compiling the Package

Place the LIO-SAM-ros2 folder from the [Lego-Loam Source Code] in the [Attachments] folder into the src directory of your workspace, then go back to the workspace and enter the following command to compile,

```
colcon build
```
